

CORRIGENDUM

Palmer, P. Estimates of sources of air pollution in Christchurch compared with recorded observations, *Weather & Climate*, 27, 2007, 65-76.

Table 3 was inadvertently omitted from this paper in the last issue of this Journal (No.27, 2007). It was published in *Newsletter 109* June 2007 page 10. The Editor apologizes for this mishap and for completeness it is printed below. It should appear on page 71 immediately before the **Discussion** section.

	PM ₁₀	Nox	CO
Estimated emissions, kg*	707	662	7109
Recorded concentrations, µg/m**	277	1280	16134
	Nox/PM ₁₀	CO/PM ₁₀	
Ratio of estimated emissions	0.94	10	
Ratio of recorded concentrations	4.6	58	

*Table 3. Estimated amounts (kg/ha) of PM10, NOx and CO emitted between 4pm and 10pm, and mean hourly concentrations (µg/m³) recorded between 5pm and 11 pm on 17 high pollution nights, and ratios of estimated emissions of PM10, NOx and CO, and of the measured concentrations. * From Table 6.4, Fisher et al (1998). ** From Canterbury Regional Council air quality records.*
